

LETTER OF RECOMMENDATION

To Whom It May Concern,

I am pleased to recommend Aryan Sehgal, whom I had the opportunity to directly manage during his tenure at Sprinklr. As the Vice President of Engineering at Sprinklr, I worked closely with Aryan and had the opportunity to observe his technical capabilities, problem-solving approach, sense of ownership, and professional growth.

Aryan distinguished himself through his ability to take ownership of complex and relatively open-ended problems and turn them into practical, well-structured product solutions. He demonstrated a strong combination of technical ability, analytical thinking, initiative, and persistence, and was particularly effective in situations that required him to operate with a high degree of independence.

A particularly significant example of Aryan's work was his contribution to Sprinklr's Ads Creative Management solution. The product was designed to help organizations improve creative efficiency by reducing media production costs, ensuring compliance with brand and channel guidelines, and enabling more effective discovery and reuse of existing creative assets. Aryan was one of the two core members working on this initiative and was responsible for building a substantial portion of the product from the ground up.

Working in such a lean team required Aryan to take ownership across multiple aspects of the product rather than focusing narrowly on an individual component. He was required to understand the underlying problem, translate requirements into product functionality, make sound technical decisions, and work through challenges independently. His ability to take a product from an early stage to a functioning solution demonstrated both strong execution skills and a broader understanding of how technology can be applied to solve meaningful business problems.

The product also incorporated AI and machine-learning-based capabilities for creative evaluation, including AI-assisted generation of brand guidelines and creative scoring based on brand compliance and advertising performance. Working on these capabilities gave Aryan exposure to the practical application of intelligent systems in a real-world product environment and demonstrated his ability to engage with technically and conceptually challenging problems.

One of Aryan's strongest qualities is his willingness to learn and go beyond the immediate requirements of an assignment. He consistently sought to understand not only how a solution should be implemented, but also why a particular problem mattered and how different components contributed to the overall product. This combination of curiosity and execution allowed him to make meaningful contributions despite working in a very small team.

Aryan also demonstrated a strong sense of accountability. Given the size of the team, there was little room for narrowly defined responsibilities or dependence on extensive supervision. He was able to work independently, make progress in ambiguous situations, identify problems proactively, and take responsibility for delivering outcomes. I found this level of ownership particularly impressive for someone at his stage of professional development.

Beyond his technical contributions, Aryan was a thoughtful and dependable colleague. He communicated effectively, was receptive to feedback, and worked constructively through challenging situations. Over the course of our association, I observed him become increasingly confident and independent in his approach to problem-solving and decision-making.

In my assessment, Aryan possesses a strong combination of intellectual curiosity, analytical ability, technical aptitude, initiative, adaptability, and integrity. His experience building a product in a highly lean environment has given him valuable exposure to both the technical and practical dimensions of solving complex problems.

I believe that pursuing a master's degree will provide Aryan with an opportunity to further develop his technical knowledge and analytical capabilities. Given his demonstrated ability to learn quickly, work independently, and take on challenging problems, I am confident that he will approach his academic pursuits with the same curiosity, discipline, and sense of ownership that he demonstrated during his time at Sprinklr.

I am pleased to recommend Aryan Sehgal for further academic study and wish him every success in his future academic and professional endeavors. Should any further information be required regarding his qualifications or professional experience, I would be pleased to provide it.

Sincerely,

DocuSigned by:
